Light, Fast and Portable...

The D-101 is the smallest, lightest and fastest duplication/diagnostic tool on the market today. Designed for the computer professional that needs a powerful portable solution, this hand held unit is the answer. Just place your master drive in the unit and you can take it anywhere the job requires. With bi-directional copy capability you are able to copy to a target system or from a target system.

Direct or through the Parallel Port (IDE)...

The D-101 has been developed to allow the user to duplicate through the parallel port. Now you can do a download a master drive directly to the target hard drive without removing the cover.

Bi-directional Copying...

The D-101 has the capability to copy data from a hard drive located inside the D-101 unit to a target hard drive located outside the D-101 unit or from a hard drive located outside the D-101 unit back to the hard drive located inside the D-101 unit.

Fastest data transfer speeds available... and Fan cooled

The D-101 offers transfer speeds that will exceed 400mb/min. when using the direct link to target drives. The system is also the only unit available that is equipped with a fan cooling system to insure that today's hard drives do not over heat and that data integrity is assured.

Smart Copy insures overall performance...

The Smart Copy operating system ensures that the unit will work with all operating systems, offers automatic load-size detection, and drive geometry independence. Your target drive will be fully formatted and its partitions properly scaled before it is loaded with the master's image.
